MERAKI

In 2017 Boroondara Park Primary School is implementing a Mobile Device Management solution called “Meraki MDM”.

This management solution enables administrators to push out apps (both free and paid) over a wireless network. At BPPS I am one of the administrators, the other is our Department of Education and Training school technician.

This solution is in place to make the app deployment to iPad's easier for parents, children and staff as we can push out the same app to all students. It also enables us to push out apps as we need them, not having to wait till the end of each term when a list of apps used to be sent home. Also note that we are using this system for our classroom iPads in Foundation, Grade 1 and 2 as well as Performing Arts, English as an Additional Language and our staff iPads.

Through the Meraki system BPPS does not have access to the iPad's personal files such as photos, videos, contacts and emails. What we can monitor are the apps currently installed on the device and also the GPS location. If you would prefer the GPS location wasn't known you can turn this feature off (**Settings, Privacy, Location Services**).

If you would like to know more about Meraki you may find this link helpful.
